updated: 9/24

Curriculum Vitae: Chad McKell

ABOUT

Position	Research Engineer
Company	Meta, Reality Labs Research (via Sigma Connectivity)
Address	10301 Willows Road NE, Redmond, WA 98052
Phone	+1 661 289 4215
Email	cmckell@meta.com
Website	chadmckell.com

Research — My research spans mathematical modeling and numerical simulation of physical systems with an emphasis on acoustics and audio. Current projects include geometric boundary modeling for wave simulation; non-spherical harmonics for sound simulation and capture; and elastic wave simulation for sound synthesis and auditory biophysics analysis. Past projects include underwater acoustic sensing and optical standing-wave trapping.

EDUCATION

9/19–	**University of California San Diego**, Ph.D. in Computer Music Dissertation: *Geometric Boundary Modeling for Wave Simulation.* Advisors: Albert Chern (Computer Science) and Miller Puckette (Music).
9/16–10/17	**University of Edinburgh**, M.S. in Acoustics and Music Technology
8/09–12/15	**Wake Forest University**, M.S. in Physics
6/02–8/09	**Brigham Young University**, B.S. in Biophysics

EMPLOYMENT

9/24–	**Meta, Reality Labs Research (via Sigma Connectivity)**, Research Engineer
3/24–6/24	**University of California San Diego**, Teaching Assistant in Computer Science
6/23–2/24	**Meta, Reality Labs Research**, Research Scientist Intern
8/21–3/22	**Meta, Reality Labs Research**, Research Intern
9/19–6/23	**University of California San Diego**, Teaching Assistant/Researcher in Music
7/18–7/19	**Applied Research in Acoustics**, R&D Scientist
5/18–5/18	**Moog Music (self-employed)**, Audio Software Developer
4/17–9/17	**Lofelt, acquired by Meta in 2022 (self-employed)**, Acoustics Researcher
10/14–8/16	**J.P. Morgan/Neovest (via ConsultNet)**, Software Development Engineer in Test
8/12–12/12	**University of North Carolina School of the Arts**, Adjunct Instructor of Physics
9/09–9/11	**Wake Forest University**, Teaching Assistant in Physics
9/08–6/09	**Brigham Young University**, Tutorial Lab Assistant in Physics
8/07–3/09	**Brigham Young University**, Research Assistant in Philosophy

RESEARCH ACTIVITIES

9/24– **Meta, Reality Labs Research (via Sigma Connectivity)**, Research Engineer
Redmond, Washington. Research topics: *computational physics, numerical simulation, parallel computing.* Research summary: Build multiphysics models and custom high-performance acoustic wave simulation software for applications in virtual and augmented reality. Supervisor: Sebastian Prepeliță. Team Lead: Ravish Mehra (Research Audio). I work for Meta as a vendor employed full-time by Sigma Connectivity.

RESEARCH ACTIVITIES CONT.

9/19–	**University of California San Diego**, Ph.D. Student La Jolla, California. Research topics: *computational physics, numerical simulation, differential geometry.* Dissertation summary: developed mathematical and computational methods for handling geometric boundaries in wave simulations. Committee members: Albert Chern (co-chair), Miller Puckette (co-chair), Melvin Leok, Shahrokh Yadegari, Stefan Bilbao (Univ. of Edinburgh), and Sebastian Prepeliță (Meta).
6/23–2/24	**Meta, Reality Labs Research**, Research Scientist Intern Redmond, Washington. Research topics: *computational acoustics, numerical simulation, parallel computing.* Research summary: Built custom high-performance acoustic wave simulation software for applications in virtual and augmented reality. Supervisor: Sebastian Prepeliță. Team Lead: Ravish Mehra (Research Audio).
8/21–3/22	**Meta, Reality Labs Research**, Research Intern La Jolla, California. Research description: see above.
7/18–7/19	**Applied Research in Acoustics**, R&D Scientist Culpeper, Virginia. Research topics: *underwater acoustic sensing, acoustic beamforming.* Research summary: developed physics-based signal processing algorithms for object detection and classification in naval sonar systems. Team Lead: Jonathan Botts.
1/17–8/17	**University of Edinburgh**, Master's Student Edinburgh, Scotland. Research topics: *computational acoustics, elastodynamics, numerical simulation.* Research summary: developed numerical simulations of structural acoustic vibrations for commercial haptic devices. My thesis was partially funded by Lofelt, a Berlin-based haptic feedback company acquired by Meta in 2022. Advisor: Stefan Bilbao.
1/10–9/13	**Wake Forest University**, Master's Student Winston-Salem, North Carolina. Research topics: *optical trapping, laser beam characterization, fluid dynamics.* Research summary: simulated and fabricated standing-wave optical traps for Brownian particle tracking. Advisor: Keith Bonin.
8/07–8/09	**Brigham Young University**, Undergraduate Student Provo, Utah. Research topics: *structural biology, scanning probe microscopy.* Research summary: investigated the physical effect of anesthetics on lipid bilayer structures using atomic force microscopy. Advisor: David Busath.

TEACHING EXPERIENCE

As Instructor

UNCSA

SCI 1100	General Physics. Fall 2012 (1 term).

As TA

UCSD

CSE 291	Physics Simulation. Spring 2024 (1 term).
MUS 5	Sound in Time. Spring 2020 (1 term).
MUS 6	Electronic Music. Fall 2020 (1 term).
MUS 15	Popular Music: David Bowie. Winter 2021 (1 term).
MUS 15	Popular Music: Video Game Music. Winter 2020 (1 term).

TEACHING EXPERIENCE CONT.

MUS 171	Computer Music I. Winter 2022 (1 term).
MUS 172	Computer Music II. 2021–2022 (2 terms).

WFU

PHY 113	General Physics I (Mechanics). 2009–2011 (4 terms).
PHY 114	General Physics II (E&M). Fall 2010 (1 term).

As Tutor

BYU

PHSCS 105	General Physics 1 (Mechanics). 2008–2009 (2 terms).
PHSCS 106	General Physics 2 (E&M). Winter 2009 (1 term).
PHSCS 121	Principles of Physics 1 (Mechanics). 2008–2009 (2 terms).
PHSCS 123	Principles of Physics 2 (Waves/Thermo). W/Sp 2009 (2 terms).
PHSCS 220	Principles of Physics 3 (E&M). W/Sp 2009 (2 terms)

PUBLICATIONS

Manuscripts in Progress

(1) **C. McKell**, M. Nabizadeh, S. Wang, and A. Chern, "Wave simulations in infinite spacetime".

Simulating wave propagation on an infinite domain has been a long-standing computational challenge. Conventional approaches to this problem only produce wave simulations on a small subset of the infinite domain. Using the fact that wave propagation on an infinite Minkowski spacetime is equivalent to wave propagation on a bounded Minkowski spacetime under a Kelvin-like transformation, we simulate wave propagation on the entire infinite domain using a finite discretization of the bounded domain with no additional loss of accuracy from the transformation.

(2) **C. McKell**, *Geometric Boundary Modeling for Wave Simulation*, Ph.D. Dissertation, University of California San Diego. Defense planned for Fall 2024. Advisors: Albert Chern and Miller Puckette.

This work presents novel geometric methods for handling open exterior boundaries in wave simulations. First, I discuss extensions to the reflectionless discrete perfectly matched layer for the wave and Helmholtz equations. Then, I demonstrate that the conformal invariance of the wave equation under a Kelvin transform in Minkowski spacetime allows one to convert an infinite domain problem into a bounded domain problem that can be solved using standard numerical methods with no additional loss of accuracy introduced by the transform. I conclude by discussing parallel computing strategies for the geometric boundary models, applications in architectural acoustics and binaural audio, and future work in obstacle boundary flattening.
