Research I am a Ph.D. student at UC San Diego. In my research, I develop computational and mathematical methods for acoustic simulation. Topics of interest include virtual acoustics, sound synthesis, and differential geometry. My research has applications in music, animation, virtual reality, and other fields.

Ongoing research projects include: wave-based simulations of head-related transfer functions and 3D acoustic spaces; geometric methods for modeling open boundaries, including Kelvin transformations and discrete perfectly matched layers; and parallelization of finite-difference time-domain solvers.
